

SAARTHI

THEMATIC REPORT / 2026 SAMPLE EDITION

Infrastructure & the Next Catchment

A research framework for corridors, access and emerging locations.

ILLUSTRATIVE SAMPLE / EDITORIAL FRAMEWORK

Created for the SAARTHI platform demonstration. Not an official publication, market outlook or investment recommendation.

Trace the project, then the place

Project record

Capture the project name, responsible authority, mapped route and dated sources. Label each item as proposed, approved, under construction or operational only when the supporting source warrants it.

Location record

Describe the micro-market boundary, approach roads, interchanges and last-mile connections. Record which observations are mapped, remotely assessed or physically inspected.

Research question

What practical connection would change for this location? The final report should explain the mechanism and supporting evidence, rather than assuming every nearby parcel benefits equally.

Show the conditions behind the thesis

Milestone scenarios

Present separate scenarios for the stated schedule, delay and partial completion. Identify the assumption that changes in each scenario and the evidence needed to update it.

Required exhibits

An approved publication could include a sourced route map, milestone timeline, catchment definition and comparable market series. This sample intentionally contains no fabricated map coordinates or market data.

Review checklist

Confirm source dates, boundary definitions, permissions for external data and the status of each project reference. Distinguish evidence from interpretation throughout the final report.
