LAND INTELLIGENCE / 2026 SAMPLE EDITION

The Parcel Perspective

A structured brief for understanding land and development questions.

ILLUSTRATIVE SAMPLE / EDITORIAL FRAMEWORK

Created for the SAARTHI platform demonstration. Not an official publication, market outlook or investment recommendation.

Assemble one coherent parcel brief

Identify the subject

Record the parcel identifiers, stated area, boundaries and available plans. Flag inconsistencies between sources instead of silently reconciling them.

Capture the context

Document access, adjacent uses, infrastructure and the planning sources available for review. Keep a dated evidence register so later readers can reconstruct the basis of the brief.

Assign the review

Ownership, permissions and development rights require parcel-specific specialist review. This editorial sample does not establish title, permitted use or development entitlement for any land.

Compare questions before alternatives

Development concept

Describe the proposed use and its assumptions. Separate a conceptual scheme from a permission-backed scheme and list the work required to move between them.

Partner discussion

For a development-partner brief, describe the owner objective, available evidence, unresolved questions and the proposed diligence process. Do not imply that a match or outcome is assured.

Final publication

An approved report should include source references, clear boundary plans and the limits of its review. The structure here is a sample for the SAARTHI download experience.
