PORTFOLIO RESEARCH / 2026 SAMPLE EDITION

The Family Real Estate Lens

A common language for holdings, dependencies and review priorities.

ILLUSTRATIVE SAMPLE / EDITORIAL FRAMEWORK

Created for the SAARTHI platform demonstration. Not an official publication, market outlook or investment recommendation.

Start with an agreed inventory

The holding record

Describe each holding with a consistent set of fields: location, ownership interest, use, occupancy information and available valuation records. Keep unknown values distinct from zero.

The evidence record

Record the date and method of each valuation, the coverage of each tenancy record and the source of each ownership detail. A research view should not imply greater precision than the inputs support.

The family question

What decisions is the family considering, and over what period? Document the questions before selecting the metrics so the report supports a defined review process.

Make shared dependencies visible

Common exposures

Explore which holdings share geography, tenants, developers or infrastructure dependencies. Any quantitative analysis would require verified holdings and a disclosed methodology.

Information gaps

Create a short register of missing documents, stale valuations and unresolved assumptions. Name the owner and proposed review date for each research task.

Use and limitations

This sample is a qualitative research framework. It contains no client holdings, risk scores, return forecasts or recommendations and is not a completed portfolio assessment.
